10.6 Practice Problems

* A group of $n=15$ students was surveyed about the number of times they've unlocked their phone yesterday. Unlocks: 12 13 19 20 21 21 23 23 24 25 28 29 34 38 47
 Their statistics professor claims students unlock their phone more than 20 times per day.
 Go through the 5 hypothesis testing steps to test whether the median number is greater than 20.
 $\alpha=0.05$

Step 1. Set up hypotheses and determine level of significance.

$H_0: MD=20$ vs. $H_1: MD>20$ $\alpha = 0.05$

Step 2. Select the appropriate test statistic.

$x =$ (the number of observations $> MD_0$)

Use binomial probabilities $n=15, p=1/2$.

Step 3. Set up decision rule.

Reject H_0 if $P(X \geq x_\alpha) \leq \alpha$

| x | P(X=x) | P(X≤x) | P(X≥x) |
|----|--------|--------|--------|
| 0 | 0.0000 | 0.0000 | 1.0000 |
| 1 | 0.0005 | 0.0005 | 1.0000 |
| 2 | 0.0032 | 0.0037 | 0.9995 |
| 3 | 0.0139 | 0.0176 | 0.9963 |
| 4 | 0.0417 | 0.0592 | 0.9824 |
| 5 | 0.0916 | 0.1509 | 0.9408 |
| 6 | 0.1527 | 0.3036 | 0.8491 |
| 7 | 0.1964 | 0.5000 | 0.6964 |
| 8 | 0.1964 | 0.6964 | 0.5000 |
| 9 | 0.1527 | 0.8491 | 0.3036 |
| 10 | 0.0916 | 0.9408 | 0.1509 |
| 11 | 0.0417 | 0.9824 | 0.0592 |
| 12 | 0.0139 | 0.9963 | 0.0176 |
| 13 | 0.0032 | 0.9995 | 0.0037 |
| 14 | 0.0005 | 1.0000 | 0.0005 |
| 15 | 0.0000 | 1.0000 | 0.0000 |

Reject H_0 if $x \geq 12$.

Step 4. Compute the test statistic.

$x =$ (the number of observations $> MD_0$)

| Sorted | Signs>20 | Ranks |
|--------|----------|-------|
| 12 | -1 | 1 |
| 13 | -1 | 2 |
| 19 | -1 | 3 |
| 20 | 0 | 4 |
| 21 | +1 | 5 |
| 21 | +1 | 6 |
| 23 | +1 | 7 |
| 23 | +1 | 8 |
| 24 | +1 | 9 |
| 25 | +1 | 10 |
| 28 | +1 | 11 |
| 29 | +1 | 12 |
| 34 | +1 | 13 |
| 38 | +1 | 14 |
| 47 | +1 | 15 |

$x=11$

Step 5. Conclusion.

We do not reject H_0 because $11 < 12$. We do not have statistically significant evidence at $\alpha = 0.05$ to show that the statistics students look at their phone more than 20 times per day. Compare to t ?

Note: $\bar{X} = 24.933, s = 9.0512, t = 2.1713, t_{0.05,14} = 1.761$

5. The recommended daily allowance of Vitamin A for children between 1 and 3 years of age is 400 micrograms (mcg). Vitamin A deficiency is linked to a number of adverse health outcomes, including poor eyesight, susceptibility to infection, and dry skin. The following are Vitamin A concentrations in children with and without poor eyesight, a history of infection, and dry skin.

With: 120 420 180 345 390 430 (Group 1)

Without: 450 500 395 380 430 (Group 2)

Is there a significant difference in Vitamin A concentrations between children with and without poor eyesight, a history of infection, and dry skin? Run the appropriate test at a 5% level of significance.

Step 1. Set up hypotheses and determine level of significance.

H_0 : The two populations are equal

vs.

H_1 : The two populations are not equal. $\alpha = 0.05$

Step 2. Select the appropriate test statistic.

$$U = \min(U_1, U_2), \quad U_1 = n_1 n_2 + \frac{n_1(n_1 + 1)}{2} - R_1, \quad U_2 = n_1 n_2 + \frac{n_2(n_2 + 1)}{2} - R_2$$

Step 3. Set up decision rule.

Reject H_0 if $U < U_{\alpha, n_1, n_2} = U_{0.05, 6, 5} = 3$.

| n_2 | 1 | 2 | 3 | 4 | 5 | 6 |
|-------|---|---|---|---|---|---|
| 2 | | | | | | |
| 3 | | | | | 0 | 1 |
| 4 | | | | 0 | 1 | 2 |
| 5 | | 0 | 1 | 2 | 3 | 4 |
| 6 | 1 | 2 | 3 | 4 | 5 | 6 |

Step 4. Compute the test statistic.

| Total Sample | | Ranks | |
|--------------|---------|------------|------------|
| With | Without | With | Without |
| 120 | | 1 | |
| 180 | | 2 | |
| 345 | | 3 | |
| | 380 | | 4 |
| 390 | | 5 | |
| | 395 | | 6 |
| 420 | | 7 | |
| 430 | 430 | 8.5 | 8.5 |
| | 450 | | 10 |
| | 500 | | 11 |
| | | $R_1=26.5$ | $R_2=39.5$ |

$$U_1 = (6)(5) + \frac{6(6+1)}{2} - 26.5 = 24.5$$

$$U_2 = (6)(5) + \frac{5(5+1)}{2} - 39.5 = 5.5$$

$$U = \min(24.5, 5.5) = 5.5$$

Step 5. Conclusion.

Because $U=5.5 \geq U_{0.05, 6, 5}=3$, fail to reject H_0 . No evidence to show there is a significant difference in Vitamin A concentrations between children with and without poor eyesight, a history of infection, and dry skin.
