MATH 4740/MSSC 5740

Chapter 10 Problem Solving # * (sign test), 5 (Mann-Whitney U Test)

10.5 Summary

Sign Test: $MD=MD_0$ (One Sample)	x = number of observations > MD_0 If value<MD_0, –. If value=MD_0, 0. If value>MD_0, +.
Mann-Whitney U Test: Two populations equal or not (not-Paired)	$U_1 = n_1 n_2 + \frac{n_1(n_1+1)}{2} - R_1$ $U_2 = n_1 n_2 + \frac{n_2(n_2+1)}{2} - R_2$ $U = \min(U_1, U_2)$

MATH 4740/MSSC 5740

Chapter 10 Problem Solving # * (sign test), 5 (Mann-Whitney U Test)

10.6 Practice Problems

* A group of n=15 students was surveyed about the number of times they've unlocked their phone yesterday. Unlocks: 12 13 19 20 21 21 23 23 24 25 28 29 34 38 47

Their statistics professor claims students unlock their phone more than 20 times per day.

Go through the 5 hypothesis testing steps to test whether the median number is greater than 20.

α=0.05

Step 1. Set up hypotheses and determine level of significance.

H_0: vs. H_1:

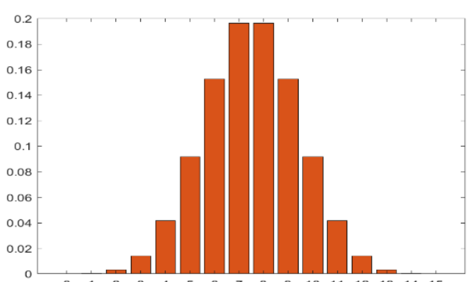
Step 2. Select the appropriate test statistic.

Use binomial probabilities n=5, p=1/2.

Step 3. Set up decision rule.

Reject H_0 if $P(X \geq x_\alpha) \leq \alpha$

x	P(X=x)	P(X≤x)	P(X≥x)
0	0.0000	0.0000	1.0000
1	0.0005	0.0005	1.0000
2	0.0032	0.0037	0.9995
3	0.0139	0.0176	0.9963
4	0.0417	0.0592	0.9824
5	0.0916	0.1509	0.9408
6	0.1527	0.3036	0.8491
7	0.1964	0.5000	0.6964
8	0.1964	0.6964	0.5000
9	0.1527	0.8491	0.3036
10	0.0916	0.9408	0.1509
11	0.0417	0.9824	0.0592
12	0.0139	0.9963	0.0176
13	0.0032	0.9995	0.0037
14	0.0005	1.0000	0.0005
15	0.0000	1.0000	0.0000



Reject H_0 if $x \geq$.

Step 4. Compute the test statistic.

x = (the number of observations > MD_0)

Sorted	Signs>20	Ranks
12		
13		
19		
20		
21

23		
23		
24		
25		
28		
29		
34		
38		
47		

x=

Step 5. Conclusion.

We ___________ H_0 because < . We _____ have statistically significant evidence at α = 0.05 to show that the statistics students look at their phone more than 20 times per day. Compare to t?

Note: $\bar{X}$ =24.933, s =9.0512, t=2.1713, $t_{0.05,14}$=1.761

5. The recommended daily allowance of Vitamin A for children between 1 and 3 years of age is 400 micrograms (mcg). Vitamin A deficiency is linked to a number of adverse health outcomes, including poor eyesight, susceptibility to infection, and dry skin. The following are Vitamin A concentrations in children with and without poor eyesight, a history of infection, and dry skin.

With: 120 420 180 345 390 430 (Group 1)
Without: 450 500 395 380 430 (Group 2)

Is there a significant difference in Vitamin A concentrations between children with and without poor eyesight, a history of infection, and dry skin? Run the appropriate test at a 5% level of significance.

Step 1. Set up hypotheses and determine level of significance.

H_0: The two populations are equal
vs.
H_1: The two populations are not equal. $\alpha = 0.05$

Step 2. Select the appropriate test statistic.

$$U = \min(U_1, U_2), \qquad U_1 = n_1 n_2 + \frac{n_1(n_1+1)}{2} - R_1, \quad U_2 = n_1 n_2 + \frac{n_2(n_2+1)}{2} - R_2$$

Step 3. Set up decision rule.

Reject H_0 if $U < U_{\alpha, n_1, n_2}$

Step 4. Compute the test statistic.

Total Sample		Ranks	
With	Without	With	Without
120			
180			
345			
	380		
390			
	395		
420			
430	430		
	450		
	500		
		R_1=	R_2=

$U_1 =$

$U_2 =$

$U = \min(\qquad) =$

Step 5. Conclusion.
